CONFIGURATION GUIDES › INSTALL, START & UPDATE

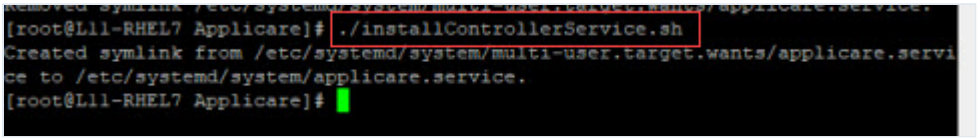

Run the Applicare Controller as a service on Linux

Applicare 9.2 · Updated August 22, 2024 · controller, linux · **Pending technical review**

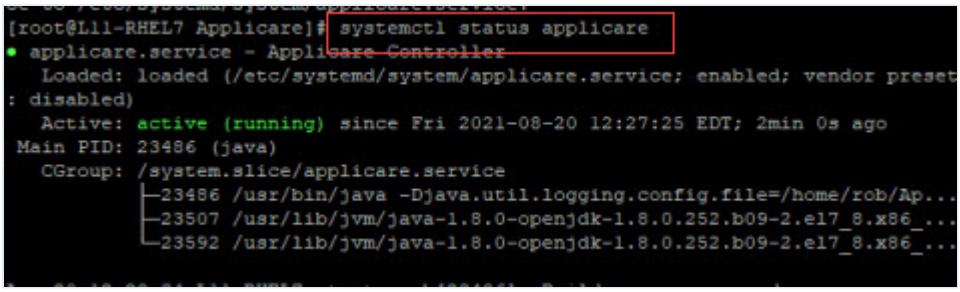

To **install** or **uninstall applicare.service, admin permissions** are required.

1. Navigate to the directory where the **Applicare Controller** is installed.

2. Run **./installControllerService.sh** to install **applicare.service.** This command will both install and start the service.

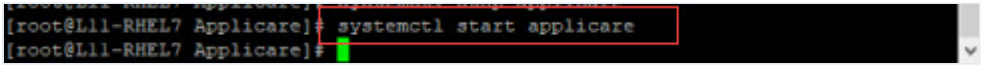

1. To **view service status** execute the command **systemctl status applicare**

2. To **Stop service** execute the command **systemctl stop applicare**

3. To **Start service** execute the command **systemctl start applicare**

4. To **Uninstall service** execute **./uninstallControllerService.sh**
